

Precision Crop Intelligence & Sustainable Yield Optimization Assessment

Multi-Crop Commercial Farming Operation

Date: August 25, 2026 | Scope: 1,000-acre enterprise

1,000 acres	3,500 bu/acre	4,200 bu/acre	2,800 bu/acre
TOTAL AREA	WHEAT TARGET YIELD	CORN TARGET YIELD	SOYBEAN TARGET YIELD

1. EXECUTIVE SUMMARY

This assessment evaluates the performance of a 1,000-acre commercial farming operation employing a wheat, corn, and soybean rotation. Precision agriculture technologies were applied to optimize input use, monitor crop health, and forecast yields. The analysis compares target yields with actual harvest results, identifies gaps, and recommends actionable strategies to enhance sustainability and profitability.

2. CROP PERFORMANCE

Crop	Target Yield (bu/acre)	Actual Yield (bu/acre)
Wheat	3,500	3,200
Corn	4,200	4,000
Soybean	2,800	2,600
