

PARC 2023■2024 Research Highlights – August 24, 2026

Introduction

PARC’s 2023■2024 research agenda focused on harnessing artificial intelligence to streamline the analysis of agricultural literature. By evaluating and integrating leading AI summarization platforms, the team aimed to reduce the time required for researchers to extract actionable insights from extensive PDF documents.

AI Summarization Tools Developed

During the period, PARC assessed several commercial and open■source summarization services, identifying key features that align with the needs of agricultural scientists. The tools evaluated included StudyPDF, ChatPDF, Heuristica, Adobe Acrobat Online, and LuminPDF.

Tool	Features	Strengths	Limitations
StudyPDF	PDF summarization, length control	Fast, intuitive	Limited language support
ChatPDF	Chat interface, interactive	User-friendly, context retention	Requires internet
Heuristica	PDF summarization, multi-language	Robust, accurate	Complex UI
Adobe Acrobat Online	PDF editing + summarization	Integrated workflow	Subscription cost
LuminPDF	PDF summarization, export options	Flexible export	Limited AI depth

User Adoption and Impact

The adoption of these summarization tools has accelerated the dissemination of research findings within the agricultural community. Researchers report a 40% reduction in time spent reviewing literature, allowing more focus on experimental design and data analysis.
