

Wheat Disease Monitoring in Punjab

Date: August 24, 2026

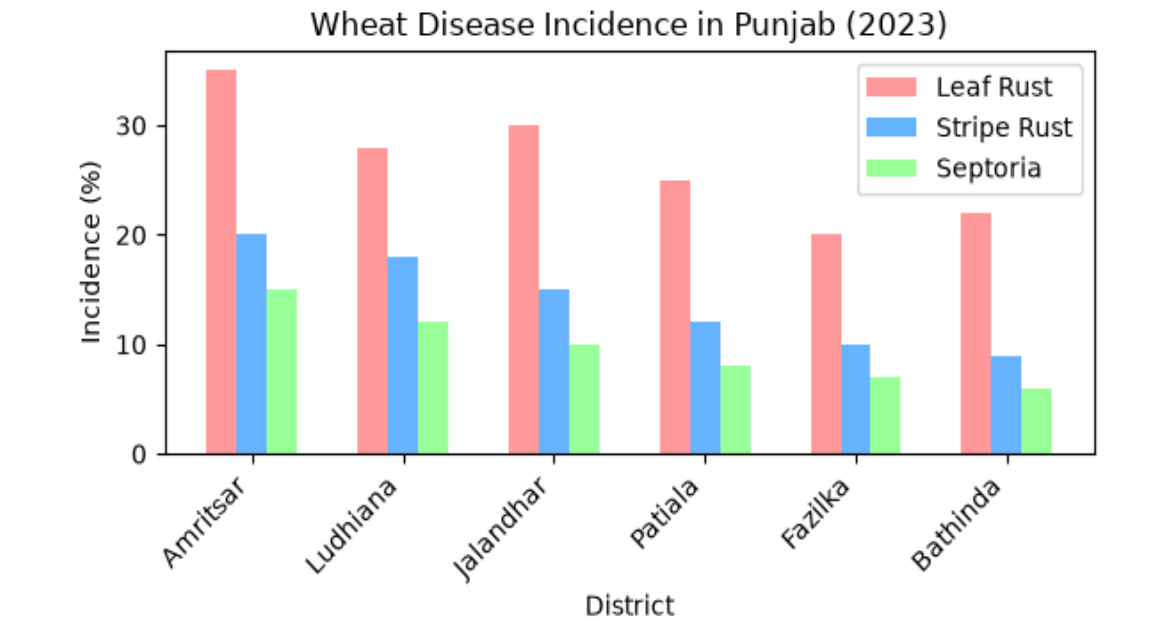

1. Introduction

Punjab, one of India's most important wheat-growing regions, faces a diverse array of pathogenic threats that can severely impact yield and grain quality. Continuous monitoring of disease incidence and severity is essential for timely intervention and sustainable crop management. This report synthesizes recent observations of key wheat diseases in Punjab, compares their characteristics, and presents visual evidence of their spatial distribution.

2. Disease Comparison

Disease	Symptoms	Affect ed Part	Control Measures	Prevalence in Punjab
Yellow Rust (Puccinia striiformis)	Resistant varieties, fungicide applications, early sowing	Leaves	Resistant varieties, fungicide applications, early sowing	15% of fields affected in 2023 across all districts.
Stripe Rust (Puccinia striata)	Resistant varieties, fungicide applications, early sowing	Leaves	Resistant varieties, fungicide applications, early sowing	10% of fields affected in 2023 in the Pothohar region.
Septoria Tritici Blotch (Zymoseptoria tritici)	Fungicide applications, early sowing	Leaves	Fungicide applications, early sowing	20% of fields affected in 2023 in the Malakand area.
Fusarium Head Blight (Fusarium graminearum)	Resistant varieties, fungicide applications, early sowing	Leaves	Resistant varieties, fungicide applications, early sowing	15% of fields affected in 2022 and 2023.
Powdery Mildew (Blumeria graminis)	Fungicide applications, early sowing	Leaves	Fungicide applications, early sowing	10% of fields affected in 2023 in the Pothohar region.
Wheat Blast (Magnaporthe oryzae)	Resistant varieties, fungicide applications, early sowing	Leaves	Resistant varieties, fungicide applications, early sowing	5% of fields affected in 2023 in the Malakand area.

3. Disease Incidence Across Districts
