

Agriculture is the practice of cultivating soil, growing crops, and raising livestock to provide food, fiber, and raw materials. It serves as the backbone of economies, especially in Punjab and across Pakistan, where it heavily drives GDP, exports, and employment. [1, 2]

### **Key Aspects of Agriculture**

- **Crop Production:** This involves the cultivation of vital staples and cash crops like wheat, rice, cotton, and sugarcane.
- **Livestock & Dairy:** The rearing of animals for meat, milk, wool, and eggs, which forms a major complementary sector to crop farming.
- **Agribusiness & Technology:** Integrating supply chains, value addition, and modern precision farming technologies (like drones and solar-powered irrigation) to maximize crop yield.
- **Aquaculture & Forestry:** Broader practices that include fish farming and the management of forests for timber and ecosystem balance
